

EFAEP – EMS Expert Group

Required professionals profiles of members of EFAEP- Expert Group “Environmental Management Systems”

The EMS Expert Group defines an EMS expert as having many years of extensive knowledge of ISO 14001 or EMAS, such as a lead auditor, verifier or a certifier; ideally with membership in (inter)national committees. The EMS Expert Group is keen to attract people for example from national or international standardisation and expert teams.

It was agreed that the strategy would be

- 1) to identify people with a recognised reputation;
- 2) invite them to join the WG;
- 3) and look at the practical side of joining (are they or can they become a member of one of the Member associations or what other routes can be made available?)
